

## CMS R7441 - New Features and Improvements

- **VPN Alerts**

You can now receive email alerts when VPNs drop or come online, including VPNs to both Makos and third party devices.

Supported by Mako 6600, 7582, 7600, 8600 appliances.

- **Services Selection Enhancements**

We've made it faster to select frequently used services.

- **Enterprise Template Enhancements**

We've added the ability both clone and move enterprise templates.

- **OpenVPN MFA Enhancements**

We've added the optional ability to require VPN users enter their one-time password (OTP) each time the log in to their remote access OpenVPN account. This is in addition to the existing MFA certificate and user/pass that has always been required.

When enabled, VPN users must enter the OTP at the end of their password.

## CMS R7440 - Maintenance
