CMS R8620 - Features and Improvements

- **Merchant PCI Improvements**
  We've added SAQ support for PCI DSS version 4.0.1, and improved the Task Timeline and AP Scan Review pages. We've simplified the SAQ to no longer require a Merchant ID.

- **Site Network Diagram Improvements**
  We've enriched the Site Network Diagram with additional tooltips on end user devices and ports/links, allowing greater visibility into the state of the site network.

- **SmartATG Improvements**
  We've continued to improve SmartATG, including adding the ability to customise tank colors, filter sites by active alarms, and export of site ATG data such as inventory and deliveries to PDF and CSV.

- **Universal Search Improvements**
  Universal Search now includes searching all visible pages. If you're unsure of where a page is, you can now just search for it.

CMS R8620 - Maintenance

- Account: Fixed issue with incorrectly sent account deactivation emails.

- DHCP: Fixed sort order of IP addresses on the DHCP Leases table.

- Firmware: Improved the Recent Updates page to support more reporting options.

- UI: General minor fixes and style changes.

- Wi-Fi: Fixed issue with incomplete RADIUS configuration not being rejected.

Have a suggestion to improve your experience with the Mako System?
