

CMS R8640 - Features and Improvements

- **Speed Test Improvements**

We've added the ability to view and manage speed tests at the site-level. We've also added the latest speed test results to the Network Availability Report (NAR).

- **Custom Hotspot Pages**

We've added the ability to create custom Hotspot welcome pages. You can now easily design a page with branding matching your organisation.

- **Switch Improvements**

We've added the ability to configure link aggregation type for link bonding of ports in Mako Managed Switches.

- **Periscope Improvements**

We've added support for more protocols in Periscope. You can now add Netop/Impero based Periscope apps, as well as other apps like VNC, Remote Desktop, and SSH.

CMS R8640 - Maintenance

- API: Added listMakoModels endpoint.
- API: Added support for POST on update methods.
