Real-Time Fuel Data Simplified

The Mako Networks SmartATG (Automated Tank Gauge Interrogator) feature, part of the Mako Central Management System (CMS), is designed to streamline fuel data retrieval for fuel retailers and gas station

operators. SmartATG simplifies access to critical tank gauge data, allowing operators to make informed decisions based on real-time insights—without complex network setups or additional hardware.

SmartATG Fuel Data Management

With SmartATG, fuel retailers and gas station operators can streamline access to critical tank gauge data without complex network setups or extra hardware. Empowering operators with real-time insights, SmartATG enhances decision-making, optimizes operational costs, and increases efficiency.

MAXIMIZE RETURN

- ✓ Access tank data directly in the Mako CMS or utilize our API to send it to external systems.
- ✓ Track fuel levels and detect leaks
- ✓ Prevent overstocking with real-time data

Simplify Fuel Management

Eliminate manual checks and paper printouts. Access tank data instantly from any internet-connected device, ensuring accurate fuel tracking, leak detection, and efficient inventory management.

Optimize Operational Costs

Prevent costly overstocking and emergency orders with accurate, real-time fuel data. SmartATG streamlines fuel management, directly impacting your bottom line. Access tank data directly in the Mako CMS or utilize our API to send it to external systems.

Increase Operational Efficiency

Remote ATG data access frees operators to focus on strategic tasks, reducing the need for time-consuming site visits.

Key Features and Benefits

Streamlined Fuel Data Retrieval

SmartATG automates direct access to ATG information at each site. Operators can view data in the Mako CMS dashboard or distribute it via API for seamless integration into existing systems.

Automated ATG Discovery

The Mako CMS allows dealers to auto-discover all ATGs connected to a Mako secure edge device at any location with just a few clicks.

This functionality significantly reduces setup time and enables quick, centralized ATG management across multiple sites.

Cost-Effective, No Additional Hardware Required

SmartATG operates without VPNs, firewall pinholes, or extra devices, reducing costs associated with traditional data access setups. This efficient setup minimizes installation complexity and ongoing maintenance costs.

Real-Time Alerts for Better Decision-Making

SmartATG provides operators with real-time tank level alerts, allowing remote fuel inventory management. Operators receive instant updates on fuel levels to optimize orders and alerts on critical conditions to enable timely action.

How it Works

01

Data Retrieval

The Mako secure edge device queries ATGs at a specified frequency.

02

Data Presentation

Data is displayed in the Mako CMS for quick insights or sent via API to any cloud, office, or data center system supporting Webhooks.

03

Centralized Management

Operators can manage all their locations' ATG data from a single dashboard in the CMS, ensuring quick access and easy monitoring.
