

Take Control with Mako Networks

Your secure, non-stop retail solution

Mako helps Branded Wholesalers secure and manage their networks, reduce POS downtime and save money.

ExxonMobil

The Mako System

Secure, broadband-based connectivity

If you want real options and control over your retail networks and their cost, Mako Networks is the right choice for you. Mako not only delivers you the most future-proofed network, you get to choose from three great broadband options; 1) bring your own broadband, 2) Mako can fully support your own broadband or, 3) Mako can deliver, bill, manage and support broadband for you.

Modern gas stations require a network management solution that gives you complete visibility over reporting, alerts, configuration, diagnostics and failover.

Network management made easy

Mako wants to assist you in protecting your network of retail locations by modernizing your connectivity infrastructure, giving you true choices over your connectivity options and minimizing downtime.

Mako's Central Management System (CMS) is a cloud-based service accessible via any web browser. Log in, check your

The Mako System offers you the ability to manage your entire network from anywhere. Each VLAN of a Mako device can be dedicated to a different part of your business—complete with the appropriate level of security.

Mako works on any broadband connection giving you the power to choose what's right for each of your locations.

The best choice for moving to modern connectivity is the Mako System from Mako Networks.

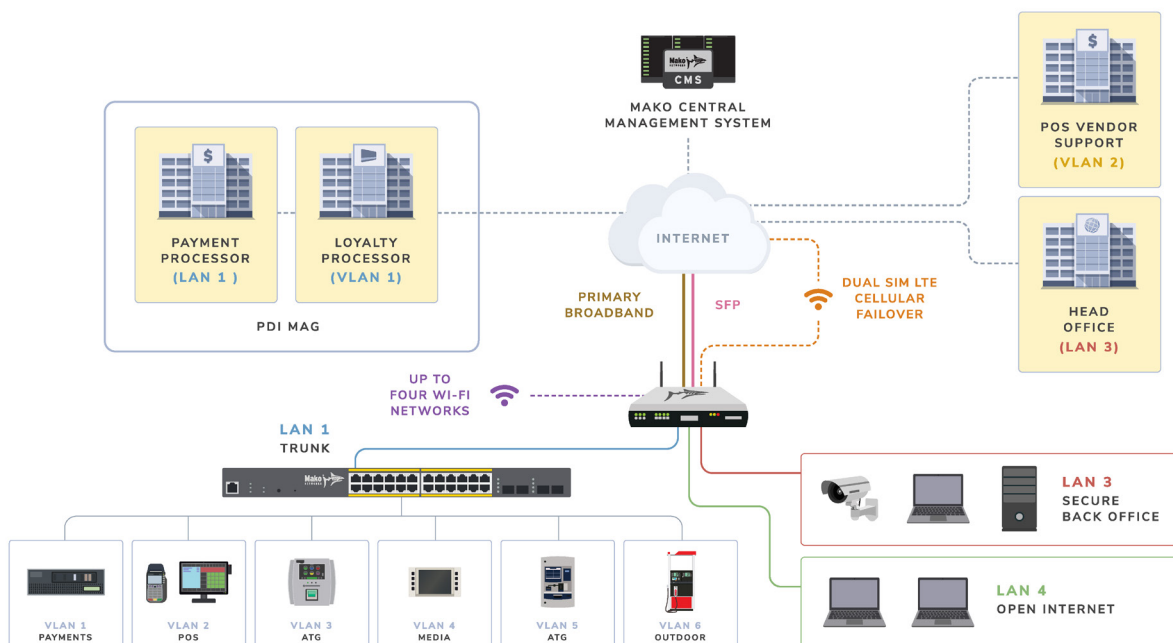

network stats, perform diagnostics, or refine your system configuration if you wish.

With Mako you have visibility and control over each location's Internet connection and the built in quality of service prevents payments from taking a back seat to other traffic.

How it works

Payment, fuel, back office and other data passes through the Internet via broadband. Mako VPNs send encrypted card and loyalty data for processing. If the WAN goes down the Mako

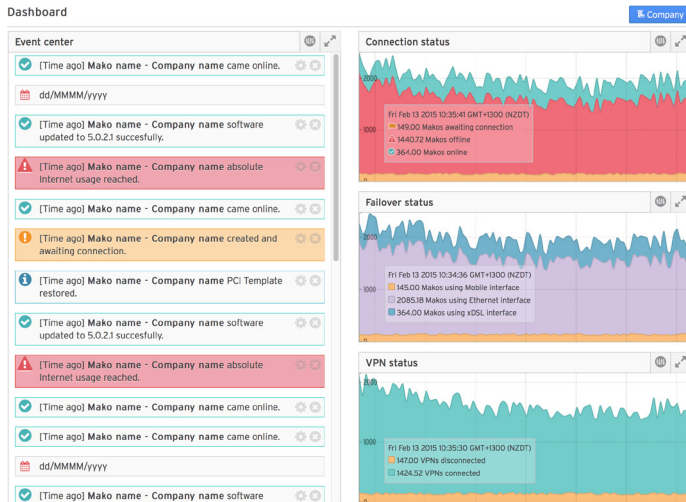

routes payments securely over the LTE cellular connection until the primary connection resumes.

You're in the driver's seat

Alerts, reports, configuration, diagnostics

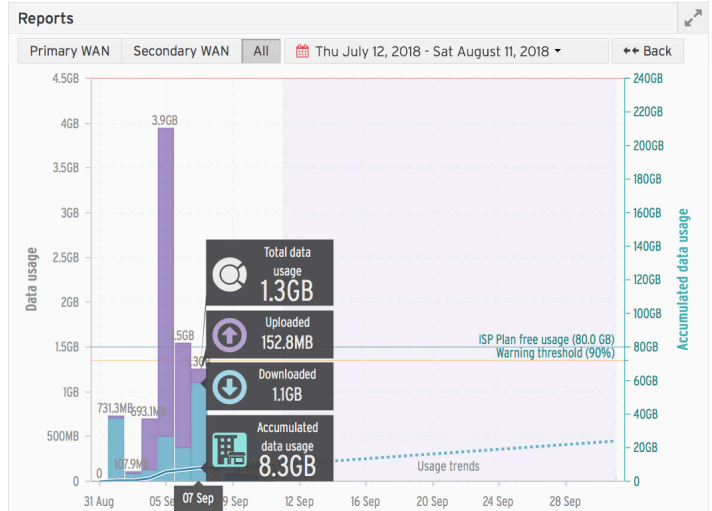

At Mako, we understand that the ability to control your network is critical to business success. Dealers demand proactive controls and alerts for all their critical systems, and the Mako System delivers. Remote IT staff can log into the Mako CMS from anywhere to view and manage what's happening with any aspect of their network. They can pull up monthly reports, manage a site's bandwidth usage and drill down by the week, day, or hour to see exactly who used what data, and how much of it. They can use the content filters to quickly resolve any issue.

High-speed cellular failover

When an unreliable network connection prevents payment transactions, you can't sell.

If your primary broadband connection goes down, the Mako device will switch to a built-in high-speed cellular Internet connection to keep you in business. And as soon as the primary connection comes back online, the Mako device automatically switches back.

7x24x365 Support: If your team needs assistance, our support team is always ready to help with the ability to perform forensic-level diagnostics and repairs at any time you need them.

"The Mako System has provided my business with improved transaction processing and a more reliable Internet connection. With its easy installation and cloud-based interface, I have better management of my store's network without worrying about IT issues like downtime and security."

The Mako System includes the following:

CELLULAR FAILOVER

Keep payments flowing with a fast LTE cellular backup connection if the primary broadband service goes down.

CLOUD-BASED MANAGEMENT

Get complete network configuration and visibility for your technical support staff with Mako's Central Management System. (Mako technical support is available by phone 24x7.)

WIRELESS

Add Mako indoor or outdoor access points to deliver high-quality wi-fi to your stores.

STATUS ALERTS

Receive real-time proactive email notifications of potential network concerns and important events such as malware threats and Internet connectivity issues.

VIRTUAL PRIVATE NETWORKS (VPNs)

Create secure, encrypted connections between your retail locations and your main office to share information.

CONTENT FILTERING

Control Internet usage by blocking sites that may be inappropriate or taking up bandwidth at your business.

USAGE REPORTING

Get detailed reports on Internet usage to help you monitor how your staff and guests are using the Internet.

PCI DSS

Achieve compliance with Mako's end-to-end PCI DSS certified security.

SEAMLESS VOICE

Maintain seamless live voice calls even if your primary network connection goes down.
