

## CMS R8010 - New Features and Improvements

### ● Health Monitors

We've added support for Health Monitors, allowing Mako devices to periodically test if a host is responding and alert if not.

Health Monitors are ideal for identifying connectivity issues. Tests can either check if a TCP port is open on the host, or if it responds to pings. The host can be local, on the other side of a VPN, or on the Internet. Mako devices must be running firmware version F6250 or newer.

## CMS R8010 - Maintenance

- Deployment: Improved validation error messages when adding Makos, Sites and Companies.
- Diagnostics: Improved performance of Current Connections diagnostic when handling large numbers of connections.
- Enterprise Templates: Fixed issue creating firewall rules without source criteria specified.
- Hardware: Renamed Mako 1048-SW to Mako 1048-SW/P.
- Mako Status Widget: Fix display issue with the ISP name.
- Sites: Improved performance of Site management screens.
- Sites: Added Move Site to the Site home screen.
- VPN Cloud: Fixed display issue with Makos or Sites with very long names.
- Webhooks: Added support for Splunk-compatible authentication headers.

Have a suggestion to improve your experience with the Mako System?
